EDUCATION

Birzeit University, *B.S. in Computer Science* Palestine, West Bank 2023 – Present

- Courses: Data Structures, Algorithms, Database Systems, Web Development, Software Engineering, Computer Networks, Operating Systems, Artificial Intelligence

PROJECTS

Scan Tool — *Web Scanner (JavaScript / Node.js / Playwright)* 2026

- Built a deep website scanner that automatically maps redirect chains across protocol and host variants for any URL.
- Extracts structure, design tokens, interactions, motion signals, and responsive snapshots at mobile, tablet, and desktop breakpoints.
- Generates per-route AI replication prompts and a structured scan report, packaging results into organized output files.

SQL Schema to UML — *Web Tool (TypeScript / Vite)* 2026

- Designed a browser tool that parses SQL DDL (CREATE TABLE / ALTER TABLE) and produces an interactive UML-style relationship diagram.
- Detects primary keys, unique constraints, and foreign keys; renders a draggable canvas with multiplicity labels.

Abaad Contracting Management System — *Database / Backend System (Flask / Python)* 2026

- Designed and implemented a Flask-based database management system for a contracting company, managing projects, employees, clients, and suppliers with full relational database design.
- Integrated analytics dashboards for building and solar project performance tracking.

StoreFront Backend — *RESTful API (Node.js / PostgreSQL)* 2025

- Built a production-ready backend API for an online storefront with JWT authentication, database migrations, and automated testing.

Image Processing API — *Backend Web API (Node.js / TypeScript)* 2025

- Developed a RESTful web API for image manipulation operations including resize, crop, and format conversion.

AI Dog Breed Recognition — *Deep Learning (Python / PyTorch)* 2025

- Implemented image classification using pre-trained CNN architectures (ResNet, AlexNet, VGG16) to identify dog breeds from pet images.

Image Classification Project — *Deep Learning (TensorFlow / Keras)* 2025

- Built a transfer learning model that classifies 102 flower species, achieving high accuracy using Keras fine-tuning.

CERTIFICATIONS

Udacity — *JavaScript Full Stack Developer Nanodegree* Dec 2025

Udacity — *AI Programming with Python and TensorFlow Nanodegree* Dec 2025

LEADERSHIP EXPERIENCE

International Model United Nations, *Honorable Mention Award* Feb 2023

- Competed in MUN conference, recognized for outstanding performance in committee debate and resolution drafting.

IEEE Xtreme Programming Competition, *Participant* 2024 – 2025

- Member of Birzeit University's competitive programming team; competed in 24-hour international algorithmic programming contest.

SKILLS AND INTERESTS

Languages (by proficiency): Java, Python, SQL, JavaScript, TypeScript, C
Frameworks & Tools: React, Node.js, Flask, Express, Angular, Git, MySQL, PostgreSQL, PyTorch, TensorFlow, Jupyter, Linux, Playwright, Matplotlib
Languages: Arabic (Native), English (C1 Proficiency)
